

Lancaster Farming

VOL. 7 NO. 34

Lancaster Farming, Saturday, August 25, 1962

\$2 Per Year

AS THE TRACTOR LABORS to push corn silage over the top of the 30 x 60 foot silo, Edison W. Osborne, Jersey cattle breeder at Peach Bottom, contemplates just how much forage the monstrous container will hold. Size of the structure with its 30 foot diameter dwarfs the tractors and silage wagon. The 125 cows now in the herd are fed automatically by the auger system shown at the bottom of the silo and extending toward the right behind Osborne. The silo has replaced a 16 foot upright silo and a trench, but two other silos, a 14 foot and a 16 foot upright, will continue in service.

L. F. Photo.

Cornwall Jersey Farm Builds Huge New Silo

How much corn does it take to fill a silo that is 30 feet in diameter and 60 feet tall?

Edison W. Osborne, Peach Bottom danyman will soon be able to tell you, and it appears that the answer might run over a thousand tons.

The huge concrete stave structure recently completed and already filled up to four doors, was built to replace an upright silo 16 feet in diameter and a trench which varied in capacity as was needed. Osborne figures the new silo will hold nearly four times as much silage per foot of height as the old one held.

Anyone who has ever climbed a silo every day to pitch down enough feed for the day can imagine what a job it would be to throw down enough by fork to feed 125 milk cows plus the heifers and young stock. But think how the job would be complicated if some of the silage had to be carried thirty feet before it could be pitched down the chute.

Silo unloaders, of course.

have been designed to take most of the work out of this job but in most systems, the unloader has to be adjusted every time the silage level falls below another door. In the silo on Cornwall Farm, the Osborne homestead, a distributor in the silo at filling time makes sure the chopped material is spread out to the edges of the silo and packed evenly.

But the most unique feature of the distributor is the cylindrical pipe which forms a natural chute right down through the center of the silo. The pipe about 30 inches in diameter, is drawn up with the distributor as the silo is filled, leaving a natural opening from top to bottom in the silo. When unloading time comes, the unloader throws the feed down the chute and a conveyor carries it to the auger over the feed trough and no doors have to be opened or closed from top to bottom.

Osborne, who milks approximately 125 head of registered Jerseys is counting on his

Researcher Recommends High Grain Feeding Rates

Dairymen were urged to feed heavier grain rations and restrict the forage to their cattle at a meeting Thursday.

Dr. Gilbert H. Porter, research nutritionist with the Beacon Milling Company, Cayuga, N. Y., told Guernsey Breeders at their annual Field Day Thursday at the Farm of Rohrer Witmer, Willow Street R2, "The program will probably get a big boost this year because of the short roughage supply."

Porter cited research conducted at his company's research farm with several pairs of identical twin calves. He said the calves which were fed on a program of restricted roughage and high grain were in better physical condition at breeding time and consequently calved in an earlier age. Milk production during the first lactation was also higher from the heifer on the high grain ration.

In recommending the program, similar to lead feeding or challenge feeding where the

cow is fed ahead of her expected production, Porter said best results could be expected from the top cows in the herd.

He called for more individual attention to the cows. "If you are going to feed up to 18 pounds of grain to a cow during a day, you should break it into at least three feedings of six pounds each,

Kiwanis Club Scholarships Announced

Two Lancaster County 4-H club members have been named to receive \$100 scholarship grants by the Lancaster Kiwanis club next week.

According to John C. Long, agricultural committee chairman of the club, the two awards will be presented to Roger Stoner and William Maule next Tuesday at a regular meeting of the club.

The grants are made annually to two 4-H members who are enrolled in the freshman class in agriculture or home economics at the Pennsylvania State University.

The awards are made on the basis of all-around participation in 4-H work and application is made on the national awards program form.

Stoner is the son of Mr. and Mrs. Raymond H. Stoner, 1051 Richard Maule, Quarryville. Maule is the son of Mr. and Mrs. Richard Maule, Quarryville. (Continued on Page 4)

Senate Passes Stripped Down Farm Legislation

The U. S. Senate on Thursday voted 47 to 37 in favor of another farm bill which included a whittled down version of the administration's plan for reducing government holdings of feed grains.

The vote, coming after only two days of debate, will send the bill back to the House where a bill with even fewer of the President's requests was passed last month.

The House version of the agricultural legislation does little more than extend existing legislation on feed grains and wheat for another year.

The principal difference in the two bills is the Senate amendment which could wipe out all price supports on feed grains starting with the 1961 crop.

The proposal, which could precipitate a fight in joint committee, allows the Secretary of Agriculture to set prices supports anywhere between zero and 90 per cent of parity so long as the action would not increase government-held surpluses.

The action by the Senate, one in a series of moves made in a drive toward adjournment, is expected to be ratified by the House, according to a spokesman for majority leaders in that body.

Darvin Boyd Exhibits His Third Grand Champion

Darvin Boyd won his third grand championship in the County 4-H Swine club round-up Wednesday with a trim mediumweight Yorkshire gilt.

The 20 year old junior at Delaware Valley College of Agriculture also took the championship with his pen of ten Yorkshires, and was a close second in the showman's contest.

Darvin, the son of Mr. and Mrs. Elmer Boyd, Ephrata R1, made his farewell appearance in 4-H swine club competition culminating eight years of showing.

In the 1955 show, his Yorkshire was named grand champion as was his Duroc in 1960. In 1959 he showed a Yorkshire to the reserve spot in the competition.

The current champion was purchased from Arlie Anderson of Masonic Home Farms on May 9 at a weight of 59 pounds. She crossed the scales at 220 on Wednesday. "But I had to hold her back for the last two weeks to keep her from getting too heavy," Boyd said.

The pen of ten champions were purchased from Ernest Weaver, Manheim Rd. and weighed 208 pounds each at show time.

Boyd had a total of 17 head of swine in the show which included the champion pen of ten and the champion Duroc. Runner up in the individual competition was the 195

pound Berkshire barrow exhibited by David Heisey, Sheridan R1.

The 16 year old student in vocational agriculture at Ephrata High School purchased his winning entry from Masonic Home Farms. He was a March pig.

Heisey had a Duroc from the same farm which placed third in breed competition. A Landrace, a Spotted Hog, two Poland Chinas and two cross-bred hogs made up the rest of the seven entries Heisey showed.

In his seven years of competition in the 4-H club, Heisey has exhibited eight breed champions, but Wednesday's show marked his first entrant.

FIVE-DAY WEATHER FORECAST

Saturday-Wednesday

Temperatures during the next five days are expected to average near the normal range of 62 at night to 82 in the afternoon. Warmer weather Saturday and Sunday will give way to cooler temperatures during the rest of the period. Precipitation during the period may total 0.1 to 0.5 inch occurring as showers or thunderstorms about Sunday.

SHEEP 10, Not enough on sale to establish a market.

New Holland reported steady prices on dairy cattle at the August 22 auction. Receipts included 119 cows, seven stock bulls and 20 stock heifers.

Fresh Holstein cows brought \$275-450 while Guernseys sold for \$175-220 and other breeds brought \$175-290. Stock bulls brought \$110-235 and stock heifers made \$65-125.

Horse receipts at the August 20 auction totaled 206 head. Prices remained steady with pony mares going at \$75-120 and geldings bringing \$40-110. Riding horses ranged from \$130-275 and driving horses brought \$130-285. Hunter horses sold for 8 to 8 1/2 cents a pound.

Market Reports Will No Longer Include Stockers

The Federal-State Market News Reporting Service has eliminated the term "Stockers" from their reports, according to James O'Hara, in charge of the Lancaster office of the service.

All subsequent reports will refer to all cattle sold to go on feed as "Feeders" rather than as feeders and stockers. The term stockers formerly referred to lighter weight cattle, and feeders designated heavier weights.

O'Hara said the new policy will go into effect with the reports this week.

Slaughter steers Four loads. Prime 1275-1435 lbs 31 75, Prime 1200-1400 lbs 30 25-31 50. Mixed Choice and Prime 1200-1450 lbs 29 00-30 25, Bulk Choice 1100-1400 lbs on the close 27 25-29 00, most sales Monday 28 25-30 00, Choice 900-1100 lbs 26 50-28 50, Wednesday load high Choice 1050 lbs 28 00.

Another Farm Bureau Fed Champion!

RESERVE CHAMPION

1962 GARDEN SPOT
BABY BEEF CLUB SHOW

"SMOKEY", owned and exhibited by KARL HESS, weighed in at 935 pounds. Karl fed his Champion Angus on his father's farm at Lancaster R6. Our sincere congratulations to Karl for his dramatic demonstration of good selection, management and feeding ability.

FARM BUREAU "Profitmaker Feed" helped Karl, as it has helped many others, get the finish and bloom that leads to the winners' circle. Whether you feed for show or fatten steers on a commercial basis — Farm Bureau has a "beef fattening ration" to fit your program. See your Farm Bureau FIELDMAN for complete details of the Profitmaker Beef Feeding Program — you'll be glad you did.

Price Highest Since March Prices Advance A Half - Cent

Broiler prices at the Lancaster Poultry Center this week averaged over 18 cents a pound for the first time since March 22. A total of 83,500 broilers in 18 lots were offered and sold at prices of 17.9 to 18.3 for a sale average of 18.02. Over three-fourths of the sales were at 18 cents. Broilers last week averaged 17.49.

A lot of 750 leghorn fowl brought 9.8 while three lots of heavy fowl ranged 17.4 to 18.3 for the 2,275 head. Three lots containing 2,425 pullets brought 24.9 to 25.1.

Only one lot failed to sell; this was a lot of 1,150 silver cross pullets bid to 34 cents. The complete August 23 sale offered 90,720 head in 27 lots and sold 89,170 head in 26 lots.

Following is the complete sale report with lot number, seller, grower in parenthesis, amount and breed, age in weeks and days, buyer and price.

Live broiler prices in Delmarva advanced about a half cent during the 24 hour period ending 10 30 Friday morning.

Delmarva reported prices of 16.7 to 17.8 on 931,200 head at farms during the period. A good demand took the moderate offerings as out of state interest continued to stimulate live demand.

Ready to cook demand improved slightly and estimated slaughter for the week end by Eastern Shore processors 763,000 head compared to 747,000 head last week end.

The Delmarva broiler-feed ratio for the week ending August 17 was steady at 3.5. Broilers averaged 16.28 and 20 per cent mash cost the grower \$93.80 per ton.

K. Good, 18.0; 23. Same, 2000 IR, 8-2, Daniel K. Good, 18.0; 24. Parke Herr, 1200 WVP, 15-6, Carl Risser, 25.0; 25. M&B (John O Moyer, Jr.), 3000 WVC, 9-2, Starr Poultry, 18.0; 26. Longenecker's Poultry, 470 H-F, Roy E. Ream, 18.3.

Sour cream has achieved a sharp increase in popularity. A sixty market survey shows a nine percent increase in consumption of this dairy product between 1960 and 1961

From Where We Stand . . . Don't Play "Dog In The Manger"

With the recent rains, farms are in better condition than they were three weeks ago. Lancaster County's tobacco crop is going to be better than most of us thought it could a month ago. Some of the corn fields that looked dead and dried up are forming ears—though the ears are small and many of them little more than nubbins. Pastures are growing again and producing some feed after several weeks of dormancy.

Soils have enough moisture to germinate August alfalfa seedings and with normal rainfall from here on out, fall seedings of small grains should get a fair start.

But hay and roughage continues to be one big question mark on most dairy and livestock farms this fall and winter.

We don't know of any farmers planning to sell out because of the shortage of forage. That is just not the way farmers do business.

One state-wide cooperative has located a supply of hay at an out of state source and is moving this hay into the commonwealth for members at cost plus transportation and minimum handling.

Farmers themselves are turning to emergency programs such as temporary pasture seedings and ensiling of corn originally planted for grain. Many dairymen are already feeding various forms of forage extenders to try to make their short hay supply go as far as possible.

Many people not living on dairy or livestock farms fail to realize that these emergency measures are just that—emergency measures. Many people writing and talking about the drought and the problems it has brought do not appreciate the seriousness of the problem. Too many people who do not have cattle on feed take the attitude of the dog in the manger. He could not eat the hay, but he would not get up and let the cow have it.

Many self-appointed experts have said that Lancaster County should have never been designated a disaster area, and we agree that there will be no widespread famine among Garden Spot farmers, but if the designation helps some hard-hit dairymen to get hay cheaper, or to harvest hay from land voluntarily taken out of production of surplus grains, then why should there be a hue and cry from those who do not want to participate. Why should the stubborn pride of persons who do not wish to transport hay at reduced rates be allowed to punish those who may need the financial relief to help them over a crisis.

Lancaster County has always been in an enviable position as far as agricultural potential is concerned, but we should never let our pride get so strong that we are ashamed to admit that sometimes things can and do go wrong—even in Lancaster County. And we should never allow our pride to overcome our common sense.

At least that's how it looks from where we stand.

Still Good Advice

In these days when some new practices are outdated before they come into widespread use in this business of farming, it is comforting to know that there are still many things that have not changed very much in the past 50 or 100 years.

Dairying, in most respects, is a far cry from the business grandfather knew. Most of the methods of handling milk and feeding cattle are examples of efficiency that grandfather could have not imagined in his wildest dreams.

But good cows were good cows three quarters of a century ago just as much as they are now, and cull cows are no more profitable now than they were then.

Seventy-six years ago Mr W. D. Hoard wrote in a magazine for dairymen, "Fodder is going to be scarce this winter in many sections and the present is a good time to get rid of the poor cows. There are thousands of men in this country who would have had more cash in their pocket last spring if they had got rid of half their cows for what they would bring in the fall before."

"Don't think you are richer for owning and wintering a poor cow, or that you can sell her next spring for enough to make up for what she has taken out of you."

"What a grand move ahead the dairy industry would take in good solid profit if every dairyman would get a Babcock test and proceed to know what sort of cows he was doing business with. 'Don't know' costs vastly more than to know."

You can't improve much on a statement like that.

At least that's how it looks from where we stand.

★ ★ ★ ★

Livestock Laws

Now and then we hear a livestock producer complain against the animal laws that make tests, vaccinations and other treatments mandatory for the person who sells or trades livestock, or who sells the product from livestock. What the complainer fails to realize is that such laws are not only a protection for a neighbor, but also for himself. Disease is no respecter of individuals or farms. An epidemic, or a costly disease that can wipe out a profit of years can as easily spread from a neighbor's farm to ours as from ours to that neighbor's. A good many of us recall the days before animal protective measures, when streams were sometimes glutted with the carcasses of hogs or cattle that had died from contagious disease, a practice that spread it far beyond our own neighborhoods at times. None of us wants those days to return. None of us wants to go back to days when we had no protection against a disease that originated somewhere else.

The Monroe County (Md.) Appeal

Bible Material: Isaiah 40:1-11, 52:7
Devotional Reading: Psalm 84:1-5

Beginning Again

Lesson for August 26, 1962

IT IS hard enough to share experiences even with those who are near and dear. "The heart knows its own bitterness, and a stranger does not intermeddle with its joy," the old proverb says. When the experiences we are invited to share are those of people dead for more than two thousand years, sharing their experience may seem impossible. Yet such is the universal reach and meaning of the Bible, where we find this ancient story, that we can learn something for our own lives.

Dr. Foreman

Nothing is harder than beginning again, especially beginning again on the scene of a failure or a disaster. Yet that is just what the Hebrew people, exiled from their beloved Jerusalem, had to do. Really, their home city was not there any more. The glories of the city Solomon built have never returned, to this day. All around the returning exiles were the ruins of the old city, in the midst of which they must slowly build a new one.

We remember that the little nation of Judah had been smashed, and that its destruction was God's will, to punish the nation for its sins. Before the crash, few would believe it could happen. But after the crash, the mood of the nation changed at once from a silly optimism to a deep and bitter pessimism. From singing the song "We are God's people and he will not let anything destroy us," they sang a different tune—how different can be seen by reading the book of "Lamentations" written at this time. From being all hope, they plunged violently to no-hope. God had turned against them, they felt. And so he had. But until the prophets persuaded them otherwise, they did not think God would ever forgive them. The prophets had to preach over and

over again: Just as for sin there must be punishment, so for repentance there is forgiveness. God punishes his own children, but he does not disown them.

After Disaster

The clock and the calendar do not run backward. What's done is done. Not even the Lord in heaven would restore Jerusalem as it was. But few disasters are totally without remedy. The storm leaves wrecks behind it—but it passes on. There is always an afterwards to the worst of calamities. It may be that a few readers of this column will be able to survive the terrors of a nuclear war, so-called. It would not be like any war ever fought before, and if you do survive, it may be five hundred miles to the nearest person who survived as you did. You will have many other problems and much distress; but one thing will be sure—that kind of "war" can happen once but not again. You will have lived through the worst disaster in human history; and after that, other things will be mild and tame by comparison. But the thing you will have to remember (the books will be burned up and what you know you won't get from books any more)—you must remember that God is always on both sides of every disaster: before and after, as is there.

After Confusion

The well-known passage from Isaiah about making a straight road in the wilderness brings up a picture of a vast desert in which it is very easy to be lost and die . . . unless you keep to the road. The road to life is narrow and hard to find, Jesus said; but there is such a road. Lost in woods or on the desert, or in a snowstorm, people are very likely to move around in circles, instead of following a straight line. So in our confused time, with the best minds hardly knowing what to do next, and nobody knowing how to bring about peace, if more people would listen to God there would be less confusion in the world. A national magazine not long ago carried a debate between an agnostic and Billy Graham on the question: Should our elected leaders be religious men? Billy Graham was surely right: they ought to be men of faith, for one reason in particular, the God-fearing man does try to hear the voice of the God of truth. Such a leader may make mistakes; but surely he is better off than the man who does not think there is a God to listen to!

(Based on outlines copyrighted by the Division of Christian Education, National Council of the Churches of Christ in the U. S. A. Released by Community Press Service.)

Now Is The Time . . .

BY MAX SMITH

TO CONTROL WEEDS IN LEGUMES

August seedings of alfalfa or clover are often injured by heavy weed growth. There are three herbicides that may be used: (1) Eptam worked into the soil before seeding the legume; (2) A Dimro spray (pre-emerge or Sinov PE) when the little legumes are in the 2 to 4 leaf stage, and (3) 2,4-DB when the weeds are 1 to 2 inches high. The proper use of any one of these should give good results. Don't wait until the weeds are 4 to 8 inches high and then spray. . . Too late

MAX M. SMITH

TO BUY HAY CAREFULLY

First, evaluate your roughage needs and don't be hasty in buying too much hay at high prices or in buying poor quality hay; some hay substitutes may furnish the feed nutrients cheaper than some high priced hay, more grain feeding or the use of more beet pulp or citrus pulp may be the answer. States to the west and to the south have hay to sell; offerings are available. Don't buy any more weeds—we have enough already.

TO BEWARE OF SILO GAS

Silo filling time is approaching and much stunted corn may end up in the silo. If this corn was produced on high fertilized soils, especially nitrogen, then some caution should be used in the detection of nitrogen dioxide, it may develop from the corn chute and is dangerous to both man and beast, it is heavier than air and will hang in the bottom of the silo, in the chute or seep out into the barn. Keep the barn well ventilated after filling and always run the blower before going into the silo or the

STEER SUPPLEMENTS

Benefit by the results of latest research and feed a

MODERN CATTLE SUPPLEMENT

The economy of non-protein Nitrogen, Stilbestrol, vitamin A, minerals and other nutrients in balancing roughages and corn for fattening cattle is universally recognized.

VITAMIN A

Cattle make relatively **poor use** of vitamin A from plants. **Maximum results** require vitamin A from other sources. **GREEN PASTURES STEER CONCENTRATES** are seasonally formulated to supply adequate quantities of vitamin A all year with greater quantities in hot weather when beef cattle requirements are highest.

TRACE MINERALS

must be furnished for the proper functioning of the rumen. **COBALT** is required by cattle to make vitamin B12. **SULFUR** is necessary to properly utilize UREA. **ZINC** has recently been demonstrated to improve Gain.

Feed Efficiency
and Bloom

GREEN PASTURES Steer Concentrates No. 29 and No. 30 are MODERN CATTLE SUPPLEMENTS

Both contain, in addition to other proteins, Urea, an economical source of protein, and molasses as a source of quick energy.

Also, vitamins and minerals in ample quantities to insure **maximum** utilization of this source of protein.

They are Complete Cattle Concentrates

When fed as recommended they adequately supplement roughage and grains to provide maximum daily gains and utilization of feed.

For a steer feeding program which will give you the best possible gains and quality in the most economical way, see any **MILLER & BUSHONG** Service Representative or call us at Lancaster 392-2145 (Area Code 717).

(From Page 1)

and if you go to 28 pounds you should divide it into at least four feedings of seven pounds each."

He asked, "Can you afford to spend this much time with your animals? Only you can answer that."

Porter also acted as official judge at the morning judging contest. Men and women tied for the first two places in the competition. John N. Landis, 1804 Hempfield Road, and Mrs. Henry Breneman, Strasburg R1, each had a score of 288 points out of a possible 300.

Frank L. Heishey, 122 Willow Road, and Mrs. Barbara Lefever, Willow Street R2, each had 287 points.

In the youth division of the contest James Adams, Landisville placed first with a score of 283. Second through fifth places were all tied at 275. They were Eugene Denlinger, Gordonville, John Meyer, 1150 Village Road, Lancaster, Elaine Stoltz, Ronks R1, and Peter Witmer, Willow Street R1.

Third through fifth places in the men's division were won by Hayes Hastings, Kirkwood, Samuel Meyer, Elizabethtown R3, and Herbert Meyer, 1150 Village Road, respectively.

In the Women's division Mrs. Louise Witmer, Willow Street R1, last year's winner

placed third, Mrs. Robert Rohrer, Lancaster R7 was fourth, and Pauline Stoltz, Ronks R1, was fifth.

In the contest to guess the age of a calf the placings were Jesse Balmer, Lititz R4, Mrs. Ellis Denlinger, Gordonville, Arthur Beneman, Willow Street R1, Raymond Rohrer, Lancaster R2, and Mrs. Anna Lefever, Quarryville R3.

Boots & Saddles Club Holds Meet

One new member, Scott Griffith, was inducted into membership by the Boots and Saddles light horse and pony I-H club at a recent meeting in the Reamstown Memorial Park. Vice president, Steve Sites, conducted the meeting. Sides of I-H horse club roundups and trail rides were shown to the group by Graybill Kulp and Kathryn Sweetgall.

After refreshments a dance was held in the park pavilion.

Next meeting of the club will be September 14 at the Landisville pavilion located to the rear of the line house in Landisville.

Recent activities of the club included a two day trail ride which began at Roether's stables, Manheim R3. Several parents accompanied members on the ride.

ce into the purple rosette ranks.

William Maule, the son of Mr. and Mrs. Richard Maule, Quarryville R2, exhibited the reserve champion pen of 10 market hogs.

Maule had an extremely

uniform exhibit of 10 Berkshires from two litters farrowed on the home farm. They averaged out a 202½ pounds at the show.

Judge, Henry Gruber, a buyer for the packing firm of Abrogast and Bastion, Allentown, said the quality of all hogs in the show was unus-

ually high.

Judge Is Bidder

Gruber nodded at Auctioneer Abe Dittenbach's call for 60 cents a pound for Boyd's champion at the afternoon auction of show entries.

A. and B, through Gruber, was the big purchaser in the 56 of the 162 head sold, in-sale taking away a total of cluding the reserve champion pen of ten which brought 22 cents a pound.

Ezra W Martin, Lancaster, purchased the reserve champ-

ion for 35 cents a pound and a total of 21 other head.

The top pen of 10 went to Kunzler and Co. of Lancaster on a bid of 25.50 per pound. Kunzler took a total of 33 head to become the second biggest buyer in the sale.

J Lloyd Hollinger, Lancaster purchased 11 head, R. P. Howry, Lancaster took 10 head; Martin's Livestock at Washington Boro bought five head; Aaron Harnish, Willow Street, purchased two head, and Leon Thomas took one

head.

Total receipts in the sale conducted by the Lancaster Union Stockyards were \$7,280.56 for the 34,070 pounds of pork. The market hogs averaged 210 pounds and the average sale price, including the champions was 21.37 per pound.

The complete show results are as follows:

BERKSHIRE
Lightweight — 1, William Maule, Quarryville R2; 2, (Continued on page 7)

GRAND CHAMPION of the 4-H Swine Club roundup at the Lancaster stockyards this week was this 220 pound Yorkshire exhibited by Darwin Boyd, Ephrata R1. The win was the third grand championship in the annual show for Boyd who has exhibited market hogs for eight years. L. F. Photo.

Jersey Farm

(Continued from Page 1)

bred heifers to bring the total up to 150 or 160 this winter — depending on the work load and how well the new feeding system handles the herd.

Up to last winter the cows were all housed in a stanchion barn and hand fed silage from upright silos. Last fall the feed bunk for the new set-up was completed and the cows were fed outside a newly-constructed pole barn. The silage was hauled from the existing upright silos and a

trench in a self-unloading wagon to the bunk last year, but with the present equipment, the silage will be conveyed directly to the bunk from the new silo.

All the cows at Coinwall Farms are still milked in a stanchion barn with a pipeline milker, but with the increase in size of the herd, it now requires two shifts to get them all through the milking line.

"The cows soon learn which shift they are in, and it takes quite a bit of work to get them to change," says Osborne, who is president of the

Lancaster County Jersey Cattle Club.

The cows are fed grain in the barn and the shift that stays in the stanchions overnight is fed hay in the stanchion barn as well. The cows that stay in the loafing barn overnight get their hay (about half their ration of roughage is hay and silage) in the pole barn loafing still. All the cows will get their

silage at the bunk outside the loafing shed.

A member of the Jersey Sire Selection committee of the Southeastern Pennsylvania Artificial Breeding Cooperative, Osborne credits good breeding as well as good feeding and management with the production record of his herd. He is aiming at 500 pounds of butterfat and over 9,500 pounds of milk per cow this

year. His herd now has a 460 pound average with two test periods to go.

"I am playing it by ear this year, but if my heifers come in the way I hope they will, I may go to 150 or 160 head of milk cows this winter, but it depends on how well we can maintain the herd average. I don't think you should sacrifice herd averages just

(Continued on Page 10)

COWS CAN EAT FROM BOTH SIDES of this bunk feeder with an auger down the center. Platform at side of the feeder is about 10 inches high and a foot wide. The boss cows can not turn sideways beside the trough and monopolize feeding space, and it is harder for the cow to back up to the trough and make manure in the feed. Silage comes from the 30' x 60' silo at the extreme right. The block wall running almost the full length of the loafing shed makes the cows walk a considerable distance between feed or water and the bedded area. This saves on bedding and tends to cause the cows to manure outside where manure can be scraped up.

L. F. Photo.

Here's a high production "Booster Feed" that will increase production levels of dairy and beef cattle!

Red Rose® RUMENATOR

This ration is an excellent booster feed or appetizer for dairy and beef animals of all ages. Fortified with vitamins A, D2, and E, animal fat and minerals, Red Rose Rumenator supplies high levels of available energy to keep herds in top condition, maintain a natural vigor and increase milk production. It's a "nutrition-saturated" complete dairy feed that gives an "energy and vitamin lift" to any dairy or beef feeding program. Try it, and you will agree with other dairy-men that Red Rose Rumenator is "just the dairy feed you have been looking for."

- Improves appetites
- Improves milk production
- Dairy cows stay at peak production longer
- Glossier haircoats, thinner skin
- Gets cows in better condition for calving
- Young stock grow faster -- are more vigorous

CHECKERBOARD

service bulletin

OLD 907's RECORD STILL STANDS

Thirty-four old cows in the Purina Farm Dairy Center herd have lifetime production records of more than 100,000 lbs. of milk. Cow number 907, pictured at right, had the best record of all. She produced 180,377 lbs. of milk in 11 lactations.

Through the years dairy animals, raised at the Farm the Purina Way from birth grow fast, freshen early and spend long, profitable years in the milking string.

Dairymen who follow the Purina Dairy Program get equally good results.

We urge you to try Purina, prove to yourself that Purina feeding costs you less.

Do You Know Livestock Mineral Is Cheap Insurance?

Purina Livestock Mineral is cheap insurance against mineral deficiencies. For just a few cents per head per year you can be sure livestock get the minerals needed to produce and reproduce efficiently.

Purina Livestock Mineral is now available in two easy-to-use forms — meal or blocks.

The meal form is ideal for free-choice feeding of feedlot cattle, hogs, and sheep. The weather resistant blocks are handy for use on range or pasture. Don't take chances with livestock health and profits — feed Purina Livestock Mineral . . . available at our Checkerboard store.

STOP FLIES COLD 5 WAYS

For most effective, economical fly protection, use a combination of Purina Fly Killers. Don't give flies a chance to light on buildings or animals, contaminate feed, spread disease germs. Fight them these 5 ways:

1. Spray or dust your livestock.
2. Apply a solution of Baytex Spray Concentrate or Purina Building Spray Powder on buildings.
3. Scatter Purina Fly Bait on the ground.
4. Use Purina Insecticide Mist inside barns.
5. Put Purina Fly Checkers wherever you find flies.

We have a full line of deadly Purina Fly Killers. Let us help you get a head start on your fly control program this summer right now. We're at the familiar Red and White Checkerboard Store.

Any way you look at it, it pays to use agricultural limestone, because experiment stations have found that at least three dollars are returned in increased crops for every dollar's worth of limestone applied. Sometimes the returns go up, they found, to one to fifteen.

Lancaster County Ranks On Top In Most Categories, Report Shows

Lancaster ranks at the top of the list of counties in 35 of 53 agricultural categories, according to figures in a new booklet published by the Pennsylvania State Department of Agriculture.

In addition, the county ranks second in four other categories and third in three more. In only four categories does the Garden Spot rank out of the first ten and these include: Total land area, 12th; Rural population as % of total, 42nd; Oats production 33rd; and Average size of farm, 66th. Only Philadelphia County has smaller farms.

In every category of production and income produced, Lancaster ranked eighth or higher with the single exception of oats production.

A list of the categories in which Lancaster leads all the other 66 in the commonwealth are: proportion of land in farms, 79%; Number of farms (includes all farms with over \$50 production per year) as of Jan. 1, 1962, 6,770; Percent Tenancy, 24.9; Rural population, 121,153; Farms with telephones, 5,316; Farms with home freezers, 4,749; Automobiles on farms, 7,299; Motor trucks on farms, 3,981; Trac-

tors on farms, 10,593; Number of livestock farms, 4,650; Cattle and calves on farms, 175,000; Average number of cows milked during 1961, 64,000; Milk produced during 1961, 506,000,000 pounds; Calf crop 1961, 65,000; Beef cattle on farms, 60,800; Hogs on farms, 40,000; Chickens on farms, 3,623,000; Average number of layers, 2,913,000; Eggs produced, 626,300,000; Broilers produced, 7,688,300; Value of poultry meat produced, \$8,464,800.

Also corn for grain, 6,765,600 bu.; Corn for silage, 329,000 tons; Wheat production, 1,937,200 bu.; Barley production, 980,700 bu.; Alfalfa hay production, 120,000 tons; All hay production, 232,500 tons; Tobacco production, 47,886,

Lancaster Farming, Saturday, August 25, 1962—13

000 pounds; Value of all field crops produced, \$36,614,900. Also cash receipt from crops, \$24,682; Cash receipts from dairy, \$23,529,000; Cash receipts from poultry, \$33,389,000; Cash receipts from other livestock, \$24,987,000; Cash receipts for all commodities, \$106,504,000; Value of Commercial fertilizer used, \$40,058,000.

Only one country outranked Lancaster in Value of lime used, Value of vegetable production, Clover and timothy production, and area of land in farms.

Only two counties outranked the Garden Spot in Production of Sheep, Production of potatoes, and Acres of all vegetables harvested.

Lancaster county ranked seventh in average value of land and buildings per acre. Peach production, and value of all fruit production. A ranking of eighth was given

to the county in average value of land and buildings per farm, Commercial apple production, Sales of forest products and Sales of nursery products.

Dr William L. Henning, Secretary of Agriculture, in a foreword to the booklet, said "this new edition of Ranking Among States and Counties" provides for the first time a capsule summary of agriculture in each county in Pennsylvania. It is the answer to a large number of requests for county summaries."

The booklet is available from the Pa. Dept. of Agriculture upon request at no cost.

Almost half the nation's milk supply is used as fluid milk and cream. The other half is used in the manufacture of ice cream, butter, cheese, non-fat dry milk and many other dairy products.

Lancaster County Is Certified Drought Disaster Area By USDA

WASHINGTON, D.C. -- State Agriculture Secretary William L. Henning reported today that emergency grazing and haying permits in drought-stricken counties had been extended to November 15 and that special funds were being sought to finance re-seeding of damaged pastures in Lehigh, Fulton and Dauphin Counties.

Henning was in Washington at the request of Governor David L. Lawrence who visited U. S. Secretary Orville L. Freeman last week in an attempt to speed assistance to Pennsylvania farmers who have been hit by summer-long dry weather.

After a conference with U. S. Department of Agriculture officials in Washington, Henning confirmed that all of the 54 counties requested by Governor Lawrence had been approved for using hay from acreage reserved under federal land retirement programs. The latest of the 54 counties were Allegheny, Lancaster and Lehigh.

Robert Reed, special assistant to Secretary Freeman, said a representative was being sent to the Lehigh, Fulton and Dauphin Counties to determine whether special emergency funds of the Agricultural Conservation Program should be released for re-seeding.

of adequate cover on burned-out pasture could threaten serious problems of soil erosion by next Spring, Henning said.

Henning also said he planned to renew the request that eastern railroads effect a temporary freight rate reduction on feed grains similar to the special 75 per cent rate on hay now in effect. He said the freight reduction on hay is scheduled to end October 31, but it should be extended further.

"Many of our farmers are going to need hay shipments later in the winter, and they will probably need supplementary corn and other grain, too," Henning said.

GAS TAX REFUND DEADLINE IS SET

Farmers have until September 30 to file for refunds on their state and federal gasoline tax.

Refunds totaling 11 cents per gallon are made on that portion of gasoline used by farmers directly in the production of agriculture products.

Machines using gasoline in the production of agricultural commodities include tractors, combines and unlicensed trucks used on the farm.

Mushroom Delicacies

By Mrs. Richard C. Spence

No other vegetable can be served in so many unusual ways as the mushroom. They are delicious raw, sauteed, simmered or pickled. They can be frozen, canned or dried. Mushroom soup is elegant and nourishing. Chicken, fish, eggs and meats are always complimented when mushrooms are added.

Plain vegetables forget to be routine when fresh mushrooms or canned ones are sauteed and added. Mushrooms with a touch of sweet or sour cream served on toast, suddenly become company fare. Added to omelettes, casseroles, grilled servings, to rice and what-have-you, mushrooms are still individual and the star of any act—when the show is food.

EQUIVALENTS FOR FRESH AND CANNED MUSHROOMS

When a recipe calls for one pound fresh mushrooms you can use 20 to 24 fresh mushrooms or one quart whole raw mushroom caps or one 6 or 8 ounce can mushroom caps or crowns.

PREPARING FRESH MUSHROOMS

Emphatically—DO NOT PEEL. In that peel is much of the fine flavor, velvety quality and minerals. Wipe with damp soft paper toweling, snap off the end of stem. Use the five star chef never washes mushrooms in his kitchen, lest they become water soaked. Also he knows that they

ognized for a long time as an important food. In its National Food Guide the U. S. Department of Agriculture lists mushrooms in Group Three of its seven basic food groups. One appealing thing about mushrooms is their low calorie content; less than 60 calories to the pound. They have a relatively high phosphorus content and top many vegetables in riboflavin, niacin and calcium. They also contain other B vitamins, and iron and copper.

KEEPING QUALITIES OF MUSHROOMS

Freshly picked mushrooms will keep in prime condition at about 32 degrees F., and with relative humidity at 85 to 90 percent, for five days. At higher temperatures the storage period should be shorter. In the house, mushrooms should be kept in the refrigerator. Oxidation causes a discoloration which, however, does not affect the flavor of food value of mushrooms. They can, of course, be frozen and will keep for much longer periods of time.

SCALLOPED MUSHROOM CASSEROLE

1 pound mushrooms
1/4 pound crackers
1-1/4 teaspoons salt
Pepper to taste
1/4 stick butter (2 tablespoons)

Wash and dry mushrooms and cut into small pieces. Turn into mixing bowl and crush the crackers over them.

HOW TO SAUTE MUSHROOMS

Use heavy skillet with plenty of surface. Do not stack slices or caps. Allow at least 2 tablespoons butter to half pound mushrooms. Keep heat medium and turn with broad spatula or pancake turner. As edges begin to brown lightly and the mushroom turns golden, turn and watch closely. Do not overcook. Salt lightly and take out of skillet as they are ready.

FOOD VALUES OF MUSHROOMS

Mushrooms have been rec-

seasoning. Scatter over caps, one cup boiling water and mix liquid red pepper with lemon juice, pour over mixture. Cover and bake about 20 minutes. To serve: spoon hot mushrooms and sauce over hot toast and garnish with crisp broiling bacon. Serves 6. (Continued on Page 16)

MUSHROOMS

(continued from page 14)

MUSHROOM LOAF

1/4 pound mushrooms
Butter
2 eggs
1 cup milk
1 cup well-seasoned chicken broth
1/2 teaspoon salt
1/4 cup chopped pimiento
1-1/2 cups soft bread crumbs
3 cups diced cooked chicken
Sauté mushrooms in butter for a few minutes. Beat eggs until light and foamy and add milk, chicken broth. Stir in salt, pimiento, sautéed mushrooms, bread crumbs and

chicken. Mix all this together and pour into a buttered loaf pan. Bake in moderate oven (350 degrees) for 50 minutes. Cut in slices and serve with cream of mushroom sauce, made as follows:

CREAM OF MUSHROOM SAUCE

1 pound sliced mushrooms
1/4 pound butter
2 tablespoons flour
1 to 1-1/2 cups cold milk
In a heavy skillet sauté mushrooms in butter. Sauté only until edges are golden brown and centers take in deep cream color. Lift onto a warmed plate and let stand while

you make the sauce. There should be two tablespoons butter in skillet. Stir in two tablespoons flour, stirring well to blend, over low heat. Cook until mixture has a nutty flavor. Stir in milk. Increase heat and stir rapidly until smooth and creamy. Season to taste; lightly stir in sautéed mushrooms. Serve over mushroom loaf slices.

STUFFED MEAT LOAF FILLING:

1/2 cup chopped onion
1/4 cup butter or margarine
1 teaspoon lemon juice
1 6-ounce can mushrooms, drained
1 teaspoon salt
1/8 teaspoon pepper
1/4 teaspoon dried thyme
1/4 teaspoon parsley
4 cups fresh bread crumbs
Cook onion in butter over moderate heat for 3 minutes. Remove from heat. Add lemon juice, mushrooms, salt, pepper, thyme and parsley. Stir lightly; then add bread crumbs. Toss lightly to mix.

MEAT LOAF

2 eggs
1 tablespoon salt
1/4 teaspoon pepper
1-1/2 teaspoons mustard
1/4 cup catsup
1/4 cup milk
3 pounds lean ground beef
Mushrooms crowns
Kitchen Bouquet
Beat eggs in large bowl; add salt, pepper, mustard, catsup and milk. Add ground beef. Mix lightly but thoroughly with a fork. In a 10" 6"x3" well greased loaf pan, pack half of the meat mixture, then all the filling and as a top layer, the other half of the meat. Place 6 mushroom crowns in a row down the center of the meat and press into the surface. Brush Kitchen Bouquet over top of meat loaf, if desired, and refrigerate until ready to bake. Bake in 350 degree oven for about 1-1/2 hours. Loosen meat from sides of pan and turn on hot platter. Serve right side up garnished with mushroom crowns heated in

their broth. Serves 4 to 10.

MUSHROOMS AND TANGLED EGGS

In a small skillet, using plenty of butter, sauté thinly sliced mushrooms. For 4 eggs use 1/2 pound mushrooms and save the stems for future use. In a large heavy skillet, melt butter to cover surface. Break whole eggs in warm skillet and keep the heat low until eggs begin to set. As soon as they are jelly-like, turn and when whites are set, but not hard, scramble them lightly with a fork. Now add the sautéed, lightly salted mushrooms and fold over and over with a pancake turner until blended. Sprinkle with finely minced parsley and a dash or two of freshly ground pepper.

There are 174 million cows in U.S. dairy farms, a record low number. But today's dairy cows have established new records for quality and production of milk.

Drought Makes Produce Scarce

Hot dry weather continues to plague our local growing area. Sweet corn, tomatoes and other vegetables have been hurt and supplies are limited at many roadside stands. Foodmarkets have plentiful supplies of all vegetables as supply channels are filled with offerings from competitive areas, reports Tom Piper, Penn State Extension Marketing Agent.

Wholesale markets report that most fresh fruits and vegetables are now selling at a

small fraction of the price obtained at other times of the year. Lettuce, cabbage, sweet corn, carrots, celery, potatoes, tomatoes and squash are in plentiful supply. Peppers, eggplant, cucumbers and salad ingredients share this classification.

The local peach harvest is at its peak and local orchards are now offering Hale, Elberta, Belle of Georgia and lesser

known varieties. Size may be somewhat smaller than usual but quality and flavor is excellent. Bartlett pears, prune plums and Rambo apples are in plentiful supply as are watermelons, cantaloupes, limes and honeydew melons.

Red meat prices remain generally unchanged from the firm levels of a week ago. Pork prices moved down slightly -- not enough to effect general details but enough to warrant some selective promotions locally. Poultry meats remain generally unchanged and are scheduled for promotion in some stores. Eggs and seafood, namely bluefish, butterfish, scallops and fillet of flounder and haddock are attractively priced.

The outlook for processed vegetables is good for the 1962-63 marketing season. A large carryover of most items coupled with an average size pack this year will mean larger total supplies of canned and frozen vegetables.

Grocers are able to buy canned peaches at the lowest packer prices in years. Part of the reason is extra large carryover stocks and another big production year. Attractive retail prices are also spurring the movement of canned and frozen fruit juices, apples, applesauce, pears and plums through marketing channels.

Guide To Cheese Storage

One guide to proper cheese storage is in the food market, believes Louise Hamilton, Penn State extension food specialist. Many shapes and sizes of cheese packages are in refrigerated cases. When you buy any of these cheeses, keep them in the refrigerator. Cheese spreads sell from the shelves. Once you open these jars, keep them in the refrigerator, soft, unripened cheese, such as cottage and cream, is perishable and should be used within a few days after buying it.

County Man Buys Top Boar At Nat'l Sale

C. Warren Leminger, Denver R1, purchased one of the top boars in the sale at the Spotted Swine type conference at Wabash Indiana recently.

According to Leminger, the conference was the most successful the Spotted Swine Association has ever held. The top ten boars averaged \$415, top ten open gilts averaged \$179 and the top ten bred gilts sold for \$184.

The Champion boar, Mr. Standout 1962, was shown by Willard Meiryman, Marshalltown, Iowa, and topped the sale at \$810 going to Cottonwood Farms, Indianapolis Indiana.

The Champion gilt, Standout Miss, 1962, was shown by Bill Hemm, Sheffield, Iowa and topped the sale at \$360, going to Meryl Runyan, Urbana, Ohio.

Leminger, a well known Lancaster County breeder of Spotted hogs, attended the conference.

TWO COUNTY AGENTS AT NATIONAL MEET

County Agent M. M. Smith and Associate County Agent Victor Plastow are attending the National County Agents Association this week.

The convention this year is being held in Las Cruces, N. M. Both men are including attendance at the convention as part of their summer vacation.

Underfeeding

Underfeeding shows up on the better cows in a herd, says Harvey E. Shaffer, Penn State dairy extension specialist. There is little to be gained in breeding for high production unless cows are fed for high production. Camping the National Forests

Storing Milk In A Can

Evaporated and condensed milk are not new products. Briefly, here's what they are and the kind of storage they need.

Evaporated milk is a concentrated, sterilized product . . . it is prepared by heating homogenized whole fluid milk in a vacuum to remove about sixty per cent of the water in whole milk. The product is then sealed in cans and sterilized. Most evaporated milk sold in stores today has vitamin D added.

Condensed milk, generally has a high sugar content, is also a concentrated milk . . . but it is not sterilized. The forty-two to forty-four per cent sugar content of condensed

ed milk helps to preserve it. The sugar also often makes it unnecessary to use additional sugar when you use condensed milk in cooking or baking.

Canned milk may be kept on the cupboard shelf, but it's better to keep it cool. A forty to sixty degree temperature

is fine for evaporated milk, but condensed milk should be stored at forty degrees for good results.

Both condensed and evaporated milk must be kept in the refrigerator after the cans are opened.

Process For Cotton Knits

Some manufacturers are
using a new shrinkage control
process on men's and boys'
cotton knit T-shirts and boxer
shorts. According to the man-
ufacturers the new process
assures correct fit from the
start, and means the size will
stay constant for the life of
the garment. Shrinkage is
said to be less than one per

cent. When you shop for cot-
ton knitwear for the men and
boys in your family, check the
tag for this new shrinkage con-
trol process you can put knit-
wear having this shrinkage
control treatment in the wash-
er and dryer knowing it will
come out the same size and
proportion as when you put
it in.

Thus an' That

Coffee and caramel are two
flavors that blend well. For
a quick and easy ice cream top-
ping, melt over boiling water a
half pound of vanilla caramel;
with two teaspoons of instant
coffee. Stir to mix well, then
serve the sauce hot.

Plastic bags that laundries
use for clean shirts are a handy
size for packing shoes and for
keeping other articles organiz-
ed in your suitcase when you
travel. When you don't have
these bags, you can use ones
that fruits and vegetables or
bread rolls are packaged in.
The bags help to keep various
articles separated from each
other and keep them fresh
it withers away. Here's one
looking

When you stack hot toast,
way you can keep it fresh and
crisp, arrange triangular slices
of toast on a folded napkin on
a hot plate, slightly overlap-
ping the slices. The napkin
absorbs steam from the toast
and keeps it crisp.

Keep cooking and salad oils
in the refrigerator for storing
over a long period of time.
Should the oils turn cloudy,
just let them reach room tem-
perature before using.

No Premium For Livestock Grown Locally

Do you receive a premium for your livestock? Are you going to expand your livestock operation because you have been told that sizable premiums were paid for Pennsylvania Livestock?

It so, Louis Moore, Penn State marketing specialist, suggests that you consider the information he has gathered on cost of transportation and market differentials. He believes many false impressions have developed concerning premiums for Pennsylvania livestock.

Costs of transporting livestock or meat from the Mid-West to Pennsylvania range from \$90-\$200 per hundred-weight depending on the point of origin, destination and method of transportation. Because of this cost it is easy to conclude that Pennsylvania producers are automatically paid a premium at least equal to the cost of transporting animals from the Mid-West.

Beef

Moore reports beef prices at Chicago and Lancaster were compared during the second and third weeks of each month of 1961 to determine the extent of premiums paid for local livestock. During three of the 24 periods the price of Choice grade beef was lower at Lancaster than Chicago. During only six of the 24 periods did the premium for local beef approach the cost of transporting beef from the Mid-West.

As 1961 was a period of high beef prices 1957 was also checked, for that was a year of low beef prices. During 1957 the price at Lancaster was higher than Chicago during only five of the 24 periods. A bigger premium is paid during periods of high prices. Most beef producers here should not assume they have the advantage of a premium price over Mid-West competition.

Hogs

Hog prices were analyzed during the same weeks at the same markets. Hog prices are consistently higher at Lancaster. The premium ranged from \$71 to \$329 per hundred-weight during the weeks checked in 1961. In most cases the difference in price exceeded the cost of transporting hogs from Indiana or Illinois points.

Since 1961 was a period of relatively high hog prices a period from August 1955 through July 1956 was checked since this was a period of low hog prices. Even during this period the price at Lancaster was consistently above Chicago, but by a smaller margin. During only 10 of the 24

periods did the margin exceed \$1.00. The margin was less than \$.75 during 10 of the periods in 1955-56.

Hog producers do obtain higher prices in Pennsylvania than at Chicago but during periods of low hog prices the margin will usually be less than the cost of transporting hogs.

Farm Women 9 Plan Meetings

September meeting plans were discussed at a recent meeting of Society of Farm Women 9 at the home of Mrs. Kenneth Eshelman, Elizabethtown R1.

Society members will be guests of Farm Women in the

Maytown area at a meeting at 2 p.m. on Saturday, September 22 in St. John's Lutheran Church, Maytown. On September 20, members will visit the County Home.

Members voted a contribution to the County Agricultural Center.

Guest Speaker was Glenn Porter, Washington Boro R1, who told of his experiences as an International Farm Youth Exchange student in Nepal.

Co-hostess was Mrs. Charles Fink.

The average American likes American cheese better than ever. He ate 5.6 pounds of it during 1961, an all-time high. He also ate plenty of other kinds of cheese, totalling 8.5 pounds in all varieties for the year.

The Andes of South America are the world's second highest mountains.

Take Guesswork Out of Dairy Feeding...

The amazing new electronic COWculator eliminates profit loss from over feeding or under feeding. . . helps you obtain the greatest possible income over feed cost. Taking into consideration all the variables which affect milk profits, the COWculator electronically computes the Maximum Profit Feeding program for each cow. . . in just 60 seconds.

CHARLES McCRABB, one of nine FIELDMEN employed by Lancaster Co. Farm Bureau, works out of our Quarryville Branch. CHARLES is anxious to help you feed more efficiently for greater profits. If a Farm Bureau FIELDMAN is not calling on you, please call Lancaster EX 4-0541 collect, and the FIELDMAN assigned to your area will contact you promptly. Our FEED SPECIALIST, Allen Mackey, will gladly visit your farm with your FIELDMAN when requested.

DO IT NOW, take advantage of the services that are yours — Call Farm Bureau for details of our scientific plan for profitable dairy farming.

PASTURE CAN'T DO IT ALONE. For peak milk production, supplement your pasture with Farm Bureau's popular DARI-PAK Dairy Ration. It's available in 14% and 16%, tasty Coarse Texture or palatable Pellets. Take yours in bags or bulk — either way you benefit from our Grain Exchange Program — full retail price for your home grain. Ask about our Large-User Program — extra discounts and refunds based on size of deliveries and volume of feed used.

Start Today... Feed the Farm Bureau Way!

Qualified FIELDMEN are anxious to serve and assist you in designing a PROFITABLE DAIRY FEEDING PROGRAM
